Text as Data - eScience Special Interest Group

Summary

Text is a ubiquitous and valued data source in the computer and information sciences, many areas of the natural and social sciences, engineering, business and more. This eScience Special Interest Group is for students, faculty and researchers interested in sharing and learning about UW research and teaching that uses text as data. The group's objectives include:

- Promote connections, conversations and collaborations among domains with text-as-data interests on the UW campus
- Provide a forum for sharing research and receiving feedback
- Learn about new research advances, data, and funding opportunities
- Provide a forum discussing teaching resources and pedagogy
- Discuss methods and software tools for processing and understanding text as data

Activities

Spring Seminar and Discussion Group

The text-as-data discussion group is a forum for learning and and sharing information. The bi-weekly session is for discussing research and receiving feedback on text methods, data, discoveries, and tools.

Time: TBD, Spring Quarter 2019
Location: WRF Data Science Studio, Physics/Astronomy Tower, 6th Floor

Please contact Spencer Wood (spwood@uw.edu) if you are interested in presenting on research or teaching during the discussion-group this Spring. The date and time will be determined based on availability of interested participants.

Moderated list serve

Anyone interested in text-as-data at UW can sign-up to receive and share information about research and activities on campus from textasdata@u.washington.edu.
